

Task 31 – Hugging Face (Space Creation)

This is an AI-powered Sentiment Analysis web application built using Hugging Face Transformers and Gradio. It classifies user input text into Positive or Negative sentiment using a pre-trained NLP model. The model used is a fine-tuned DistilBERT model trained on the SST-2 dataset for accurate sentiment detection. The application is deployed on Hugging Face Spaces, making it accessible through a web interface. Users can input any sentence and instantly get sentiment predictions with confidence scores. It demonstrates the practical use of pre-trained transformer models for real-time text classification.

The screenshot shows the 'Sentiment Analysis App' interface on a web browser. The URL is huggingface.co/spaces/gopika-a-s/mlops. The app has a dark theme. On the left, there is a text input field labeled 'text' containing the sentence 'This app is really helpful and easy to use.' Below the input field are two buttons: 'Clear' and 'Submit'. To the right of the input field is an 'output' section displaying the prediction results in a JSON format:

```
{  
  "label": "POSITIVE",  
  "score": 0.9994706511497498  
}
```

Below the output section is a 'Share via Link' button. At the bottom of the interface, there is a status bar indicating 'Use via API', 'Built with Gradio', and 'Settings'.

The screenshot shows the 'Sentiment Analysis App' interface on a web browser. The URL is huggingface.co/spaces/gopika-a-s/mlops. The app has a dark theme. On the left, there is a text input field labeled 'text' containing the sentence 'Had a bad day'. Below the input field are two buttons: 'Clear' and 'Submit'. To the right of the input field is an 'output' section displaying the prediction results in a JSON format:

```
{  
  "label": "NEGATIVE",  
  "score": 0.9995166063308716  
}
```

Below the output section is a 'Share via Link' button. At the bottom of the interface, there is a status bar indicating 'Use via API', 'Built with Gradio', and 'Settings'.
